Location: District 1 or District 4, HCMC

POSITION OVERVIEW

Join a rapidly growing software company that helps organizations around the world create a personalized journey of impact and fulfillment for their people. Explorance offers innovative Feedback Analytics solutions because we believe that each experience matters. Currently, we are looking for a Customer Support Analyst who always strives for software excellence and continuous improvement.

The Customer Support Analyst is responsible for supporting Explorance's products for our customers. This includes interacting and communicating with our internal teams to solve problems. The role also includes some consulting with customers on how to best integrate Explorance's application to 3rd-party systems to meet their automation and scalability needs.

KEY RESPONSIBILITIES

- Serve as a single point of contact while effectively and cooperatively providing superior customer support and problem resolution
- Create service requests and properly document all customer interactions and troubleshooting actions in the department's case management system
- Provide tier 2/3 functional and technical support on Explorance software solutions
- Configure and implement new functionality in the Explorance software solutions

- Log, prioritize, research, and accurately resolve complex customer inquiries and problems in a timely manner while meeting or exceeding SLAs
- Provide detailed reporting, identify functionalities, and provide status updates on identified issues internally and with the client until the customer support case is resolved
- Assist in new implementations, installations, upgrades and migrations of existing customers systems
- Investigate issues with customer IT systems such as: SSO, LMS, SIS, HRIS
- Provide basic technical and web application training to new customers when required
- Communicate and coordinate with internal departments when addressing software bugs or new releases
- Occasionally perform Quality Assurance tasks for testing of new software versions
- Follow procedures, and continually improve internal processes for maintenance of solutions that are in production
- Collaborate with developers and QA team for high quality, delivery on time

---
